

Time series analysis

This repository provides tools and functions to perform time series analysis.

Data

We need `subset_data/grouped.csv` in folder `data/generated` as input. The file is generated from running data-preparation package.

Running

Running `src/main.py` will perform the time series outlier detection analysis for the configuration in `config.json` file.

Demo

A working demo with examples of the functionalities of the repository is in `src/working_demo.ipynb`.
